1 Document Version History

A change to the version history requires an update of date and version in the page header.

The numbering format is Revision.Version, where Revision is an official document release and Version exceeding 0 is an internal work document. Please note that only if the document version has suffix 0 it is an official SDC version, e.g 1.0, 2.0, 3.0, but NEITHER 0.1, 1.2 nor 1.10. The version suffix is initialized for each new revision level.

Version	Date	Description	Signature
1.0	14-06-11	Initial public version	JeNo

2 Introduction

This document describes the purpose of papiNet document ShipmentStatus by using business terminology to provide an understanding of its content and functionality.

Sections 3 and 4 below are written using extracts from the papiNet Standard Documentation of ShipmentStatus.

3 ShipmentStatus e-Document Overview

The ShipmentStatus e-Document is sent to communicate the status of a shipment or consignment with references to other documents. Typically, a ShipmentStatus e-Document is sent from the forwarder or carrier to the consignor / forwarder.

4 The Scope of the ShipmentStatus

The ShipmentStatus is used to communicate the current status of a shipment and its current location within the transport journey. The ShipmentStatus can also be used to communicate changes to the delivery date/time due to transport issues and other transport information related to the shipment. Forwarders and carriers typically provide this information.
